Sutured Wound Care

Sutures are stitches that can be used to close wounds. Caring for your wound can help stop infection and lessen pain.

HOME CARE

- Rest and raise (*elevate*) the injured area until the pain and puffiness (*swelling*) go away.
- Only take medicines as told by your doctor.
- Clean the wound gently with mild soap and water once a day after the first 2 days. Rinse off the soap. Pat the area dry with a clean towel. **Do not rub the wound.**
- Change the bandage (*dressing*) as told by your doctor. If the bandage sticks, soak it off with soapy water. Stop using a bandage after 2 days or after the wound stops leaking fluid.
- Put cream on the wound as told by your doctor.
- **Do not stretch the wound.**
- Drink enough fluids to keep your pee (*urine*) clear or pale yellow.
- See your doctor to have the stitches removed, if you have sutures.
- Use sunscreen or sunblock on the wound after it heals.

GET HELP RIGHT AWAY IF:

- The wound gets red, puffy, hot, or tender.
- You have more pain in the wound.
- You have a red streak that goes away from the wound.
- Yellowish-white fluid (*pus*) comes out of the wound.
- You have a fever.
- You have chills and start to shake.
- There is a bad smell coming from the wound.
- Your wound will not stop bleeding.

MAKE SURE YOU:

- Understand these instructions.
- Will watch your condition.
- Will get help right away if you are not doing well or get worse.
